

SOYAM KAPASIYA

Java Backend Developer | Spring Boot | Microservice | Kafka | 2+ Years Experience

@ soyamp323@gmail.com +91 6260461494 soyamkapasiyag1 soyamkapasiya

PROFESSIONAL EXPERIENCE

Software Developer | Shiavnski Technologies

Apr 2026 – Present Full-time

Key Contributions:

- Developed and maintained enterprise-grade backend applications using Java, Spring Boot, and Microservices architecture
- Resolved high-priority production issues through root cause analysis, improving system stability and reliability
- Designed and implemented scalable REST APIs supporting thousands of daily transactions
- Collaborated with product owners, QA engineers, and cross-functional teams to deliver business-critical features
- Participated in code reviews, ensuring adherence to coding standards, design principles, and best practices
- Optimized application performance through efficient database queries, caching strategies, and concurrent processing techniques
- Conducted technical research and proof-of-concepts to evaluate and implement suitable solutions for complex requirements

Technologies: Java, Spring Boot, Microservices, Apache Camel, Kafka, PostgreSQL, Redis, REST APIs, Agile/Scrum

FEATURED PROJECTS

Portals | Servicing Domain

Sep 2024 – Mar 2026 Shiavnski Technologies

- Analyzed client requirements, Jira stories, and change requests to design and implement enhancements across financial claim-processing workflows
- Owned critical backend modules and independently handled feature development, production support, bug fixes, and root-cause analysis
- Developed and maintained REST APIs using Java and Spring Boot for claim submission, validation, approval, and reporting processes
- Collaborated closely with business analysts, QA teams, and stakeholders to translate complex financial rules into reliable backend implementations
- Optimized database queries and business logic, improving application performance and reducing processing time for high-volume claim transactions
- Integrated with internal and external services through REST-based communication while ensuring data consistency and secure information exchange
- Leveraged AI-assisted development tools, technical documentation, and proof-of-concept research to accelerate issue resolution and feature delivery
- Participated in release planning, code reviews, production deployments, and post-release monitoring to ensure successful delivery of client-driven requirements

Tech Stack: Java 8/11, Spring Boot, Hibernate, PostgreSQL, Azure Blob Storage, Azure Web App, Swagger

OceanTrack | Logistics Domain

Dec 2025 – Mar 2026 Shiavnski Technologies

- Developed and maintained 15+ REST APIs supporting shipment tracking, logistics operations, and business-critical workflows
- Worked extensively on a monolithic architecture, delivering 8+ core features while ensuring system stability
- Utilized PostgreSQL for efficient data management, handling large datasets with optimized indexing strategies
- Improved API response times from 400ms to 200ms using Java Concurrency utilities and performance optimization techniques
- Built secure RESTful APIs supporting shipment processing and logistics workflows
- Applied design patterns including Builder Pattern to improve maintainability and reduce object creation complexity
- Optimized database queries and caching mechanisms to improve application performance and reduce latency
- Developed reusable utility components for logging, validation, and common business operations across the application

Tech Stack: Java 8/11, Spring Boot, Hibernate, PostgreSQL, Azure Blob Storage, Azure Web App, Swagger

HelpDesk Intelligence Engine | Customer Support System

 Sep 2024 – Mar 2026  Shiavnski Technologies

- Developed backend microservices and webhook integrations using Java and Spring Boot to automate customer support workflows
- Built AI-powered search and knowledge retrieval modules using Python, pgvector, and Sentence-Transformers
- Designed fault-tolerant ingestion workflows for processing customer tickets and knowledge-base documents
- Implemented embedding generation, vector search, and Retrieval-Augmented Generation (RAG) pipelines for contextual knowledge retrieval
- Integrated structured LLM outputs to transform unstructured content into actionable business data
- Built monitoring dashboards for tracking tickets, workflow execution, and AI-assisted support insights

Tech Stack: Java, Spring Boot, Python, FastAPI, PostgreSQL, Pgvector, RAG, LLM, React, TailwindCSS, Webhooks

CORE TECHNICAL EXPERTISE

Backend: Java/8-25 | Spring Boot | Apache Kafka | Apache Camel | REST APIs | System Design | Microservices | Monolithic

Architecture: Kafka | Event-Driven | Redis Caching | Scalability | Concurrency | Design Patterns

Databases: PostgreSQL | MySQL | Hibernate/JPA | Redis

Tools: Docker | Git | Postman | JUnit | Mockito | ELK | Grafana | DBeaver

Cloud & DevOps: Azure | Blob Storage | Key Vault | CI/CD

AI: LLM | RAG | Prompt Eng.

KEY ACHIEVEMENTS

- Successfully delivered backend solutions for Finance, Logistics and Customer Support domains.
- Led production issue investigations and root-cause analysis.
- Designed scalable APIs supporting thousands of daily transactions.
- Mentored junior developers through code reviews and technical guidance.

EDUCATION

Bachelor of Technology in Computer Science

Chameli Devi Group of Institutions

 Dec 2021 – Jun 2024  Indore, Madhya Pradesh
